- Uninsulated Steel Hangers:** Suitable for general duct support.
- Vibration Isolators:** To reduce transmission of noise and vibration.
- Spring Hangers:** For dynamic load compensation.
- Sleeves and Anchors:** For attaching supports securely to structural elements.

Calculating Support Spacing

Use SMACNA tables and formulas to determine maximum support spacing. For example: For galvanized steel ducts up to 24 inches wide, supports are typically placed every 4 to 6 feet. Larger ducts may require supports every 8 to 10 feet or as specified in the standards.

Installing Supports

Follow these steps to ensure proper installation:

- Attach support hardware securely to structural elements, ensuring the anchorage is rated for the load.
- Use adjustable hangers or rods to accommodate leveling and alignment.
- Install supports at points that minimize duct movement and vibration.
- Use vibration isolators where necessary, particularly for systems that generate noise.
- Incorporate bridging or cross bracing to prevent lateral movement.

Ensuring Compliance and Inspection

Verify that all support details conform to SMACNA standards and local building codes. Conduct inspections during and after installation to:

- Confirm support spacing and hardware integrity.
- Check for proper leveling and alignment.
- Ensure vibration isolation measures are in place.

Document installation for future reference and maintenance.

Best Practices for SMACNA Duct Support Details
